Nilfisk-CFM introduces the new singlephase industrial vacuums
S2 and S3 Advanced technology
 The best way to work

The new range of singlephase industrial vacuums S2 and S3 has been designed following the result of market surveys carried out to define actual and future solutions in industrial vacuuming for the manufacturing world.

Some new features make these vacuums unique: the electronic board control is easy to use and enables continuous monitoring of the vacuum efficiency; it allows functional control of some options such as the solid or liquid cut-offs. It's a real "dashboard", significantly increasing the operational efficiency.

Another important feature is the modularity of the

vacuums, which can be modified in few minutes, for example by replacing the collecting system.

Great attention has been given to ergonomics: the new singlephase vacuums are light, easy to use and manoeuvrable and they grant the utmost safety, being available in L, M and H certified versions.

Last but not least, these vacuums have a modern and attractive design.

Available in more than 90 variants including the certified versions (TÜV, L-M-H), the new S2 and S3 are at the forefront of industrial vacuum technology.

Special versions of the new range
Now cleaning is easier!
 From the discharge to moving systems, discover efficient solutions in your daily work

Filtration systems: besides the star filter, available in L and M class, the vacuum can be equipped with a HEPA H14 absolute filter which can control toxic and hazardous dust.

Filter cleaning systems: two versions available: the standard system with a highly efficient manual filter shaker, and a version with an electric filter shaker.

Disposal systems: model S2 is available with a 40 litre container, model S3 with a 50 or 100 litre container. They can be both supplied with gravity unload system to be used with collecting bag or with Longopac® discharge system. The Longopac® system allows the collection of material in an "endless" bag which can be filled with the desired quantity and then cut, disposed of and immediately restored for a new use.

Lifting system: a useful kit, consisting of support, belt and handles, allows safe moving of the vacuum by a forklift or a crane.

More applications than before
Endless possibilities and benefits
 Discover the versatility of the new single-phase industrial vacuum series in every sector
